# QuantumTrace

*“Uncovering Cryptographic Debt in the Quantum Dawn”*

---

CURRENT THREAT: HARVEST NOW, DECRYPT LATER

Attackers are already intercepting and storing encrypted traffic. Quantum computing will break RSA and ECC — and most companies do not know where their legacy cryptography is hidden.

# Automated auditing. Lightweight and non-intrusive.

Complete scanning in seconds across the three critical vectors:

IN-TRANSIT

## Network

In-depth analysis of TLS traffic and packet captures.

`.pcap / TLS Handshakes`

IN-USE

## Code

Static detection of vulnerable algorithms, keys and libraries.

`Python · Java · Go`

AT-REST

## Cloud

Inventory of infrastructure, key management and load balancers.

`KMS · Load Balancers · ACM`

# From risk assessment to NIST PQC recommendations.

Rigorous prioritization powered by the Quantum Risk Score:

RISK CLASSIFICATION

**Critical (Shor)**

RSA & ECDSA — complete compromise of asymmetric keys.

**Medium (Grover)**

Weakened symmetric ciphers (e.g. AES-128, 3DES).

NIST-ALIGNED REPLACEMENT

**ML-KEM (FIPS 203)**

Recommended replacement for key exchange and encapsulation.

**ML-DSA (FIPS 204)**

Official standard for post-quantum digital signatures.

CYCLONEDX 1.6 STANDARD

# Cryptography Bill of Materials (CBOM).
# In a single click.

"We turn the panic and uncertainty of the quantum threat into an auditable inventory and a migration plan you can execute today."
